# Computer Visions Course Outline

## Get What You Want

We offer highly customizable group training courses: desktop applications, web development, networking & operating systems, technical certification, professional development & skills, help desk.

## Get It When & Where You Want It

All Computer Visions courses are available for presentation on-site or off-site for your convenience. We can roll out any combination of courses at one or more locations anywhere in the United States, according to your requirements and time table. Just let us know and we'll work with you!

## Corporate Training Solutions

Corporations look to us to train their employees. Why? Because our proven training methods have increased employee proficiency and productivity. We assign one person to each of our corporate clients to ensure quality service, and we also offer extranet Web registration, management, reporting and billing for all clients. Simplicity, quality and outstanding service are our hallmarks.

## Consulting Solutions

Consulting is about trust,

## 10233A: Designing and Deploying Messaging Solutions with Microsoft Exchange Server 2010

### Description:

This five-day, instructor-led course provides you with the knowledge and skills to design and deploy messaging solutions with Microsoft Exchange Server 2010. This course describes how to gather requirements for a messaging solution and then design the integration of Exchange Server 2010 with the current infrastructure. The course then covers how to plan and deploy the various server roles in Exchange Server 2010. You will explore the various options for implementing messaging security, policies, and compliance. The course also examines the high availability and disaster recovery options and how to develop a troubleshooting plan. Finally, the course describes how to plan the upgrade from earlier versions of Exchange Server to Exchange Server 2010 and the integration of Exchange Server 2010 with other messaging systems.

### Course Outline:

Module 1: Introduction to Designing a Microsoft Exchange Server 2010 Deployment  
This module explains how to gather business and technical requirements, and information about the current messaging system, to prepare for designing a messaging system. It also provides an overview of Service Level Management and how it can impact the design of the messaging system.  
Lessons

- Gathering Business Requirements
- Identifying Additional Requirements
- Introduction to Service Level Management
- Analyzing the Current Messaging Environment

Lab : Introduction to Designing an Exchange Server 2010 Deployment

- Evaluating the Existing Messaging Environment
- Creating a Requirements Document
- Discussion: Real-World Best Practices for Setting Budget Expectations
- Discussion: Refining the Scope of SLA Requirements

After completing this module, students will be able to:

service and accountability. Our consulting division is one of the fastest-growing around. Why? Clients trust us to provide excellent service and expertise. Visit our [consulting section](#) for more information.

### **Classroom and Computer Rentals**

Need space and equipment to conduct specialized presentations or classes? We can help. With our world class classrooms and state of the art projection and presentation equipment, we take care of the details so you can have a successful presentation.

- Gather business requirements for an organization.
- Identify additional requirements.
- Describe service level management.
- Analyze the current messaging environment.

### Module 2: Designing Microsoft Exchange Server 2010 Integration with the Current Infrastructure

This module explains how to design the integration of Exchange Server with the current infrastructure. It describes how to design the network infrastructure, the Active Directory infrastructure, and the DNS infrastructure. Additionally, this module explains how to plan the administration of Exchange Server 2010.

#### Lessons

- Designing the Network Infrastructure
- Designing the Active Directory Infrastructure
- Designing the DNS Infrastructure
- Planning Exchange Server Administration

#### Lab : Designing Exchange Server Integration with the Current Infrastructure

- Evaluating the Existing Network Infrastructure
- Determining Suitability for Exchange Server 2010
- Preparing the AD DS Forest for Exchange Server 2010
- Configuring Exchange Server Delegation

After completing this module, students will be able to:

- Design the network infrastructure.
- Design the Active Directory infrastructure.
- Design the DNS infrastructure.
- Plan Exchange Server Administration.

Module 3: Planning and Deploying Mailbox Services This module explains how to design the deployment of the Mailbox server services in Exchange Server 2010. It provides an overview of the Mailbox services in Exchange Server 2010. The module then describes how to design Mailbox server, recipient management, and a public folder architecture.

#### Lessons

- Overview of Mailbox Services in Exchange Server 2010
- Designing Mailbox Servers
- Designing Recipient Management
- Designing Public Folder Architecture

#### Lab : Planning and Deploying Mailbox Services

- Designing the Mailbox Server Deployment
- Designing Recipient Management

- Designing a Public Folder Deployment
- Implementing Mailbox Services

After completing this module, students will be able to:

- Describe mailbox services in Exchange Server 2010.
- Design Mailbox servers.
- Design recipient management.
- Design public folder architecture.

Module 4: Planning and Deploying Client Access Services in Exchange Server 2010  
This module explains how to plan and deploy client access services in Exchange Server 2010. It provides an overview of the Client Access server role and then describes how to design the Client Access server deployment, client access, and client access policies. Lessons

- Overview of the Client Access Server Role
- Designing the Client Access Server Deployment
- Designing Client Access
- Designing Client Access Policies

Lab : Planning and Deploying Client Access Services in Exchange Server 2010

- Designing the Client Access Server Deployment
- Designing Client Access
- Implementing Client Access

After completing this module, students will be able to:

- Describe how the Client Access server role works.
- Design the Client Access server deployment.
- Design access for messaging clients.
- Design policies for managing client access.

Module 5: Planning and Deploying Message Transport in Exchange Server 2010  
This module explains how to design the Hub Transport server and Edge Transport Server deployments. It also describes how to design message routing in Exchange Server 2010. The module then explains how to design the Hub Transport servers and the Edge Transport servers. Lessons

- Designing Message Routing for Exchange Server 2010
- Designing Hub Transport Servers
- Designing the Message Routing Perimeter

Lab : Planning and Deploying Message Transport in Exchange Server 2010

- Designing a Message Routing Topology
- Designing a Messaging Perimeter
- Discussion: Improving an Active Directory and Message Routing Design
- Modifying the Routing Topology

After completing this module, students will be able to:

- Design message routing for Exchange Server 2010.
- Design Hub Transport servers.
- Design the message routing perimeter.

#### Module 6: Planning and Deploying Messaging Security

This module explains how to plan and deploy messaging security. It describes how to design message security restrictions, SMTP connector security, and explains how to secure message routing between partner organizations. The module then describes how to design antivirus and anti-spam solutions.

##### Lessons

- Designing Message Security
- Designing Antivirus and Anti-Spam Solutions

##### Lab : Planning and Deploying Messaging Security

- Designing Message Security
- Designing Antivirus and Anti-Spam Solutions
- Implementing Message Security

After completing this module, students will be able to:

- Design message security.
- Design antivirus and anti-spam solutions.

**Module 7: Planning and Deploying Messaging Compliance** This module explains how to plan and deploy a messaging policy and compliance solution. It describes how to design transport rules, message classifications, and message moderation. Then the module describes how to design the AD RMS integration with Exchange Server 2010. Finally, the module explains how to design message journaling, archiving, and messaging records management.

- ##### Lessons
- Designing Transport Compliance
  - Designing AD RMS Integration with Exchange Server 2010
  - Designing Message Journaling and Archiving
  - Designing Messaging Records Management

##### Lab : Planning and Deploying Messaging Compliance

- Planning a Message Transport Implementation
- Planning a Messaging Journaling and Archiving Solution
- Planning a Messaging Records Management Implementation

- Implementing a Messaging Compliance Solution

After completing this module, students will be able to:

- Design transport compliance.
- Design Active Directory Rights Management Services (AD RMS) integration with Exchange Server 2010.
- Design message journaling and archiving.
- Design messaging records management.

#### Module 8: Planning and Deploying High Availability

This module explains how to plan a highly available Exchange Server 2010 deployment. It provides an introduction to high availability in Exchange Server 2010. It also describes how to design high availability for mailbox databases and the other Exchange Server 2010 server roles. Finally, the module explains how to design site resilience.

##### Lessons

- Introduction to High Availability Planning in Exchange Server 2010
- Designing High Availability for Mailbox Databases
- Designing High Availability for Other Server Roles
- Designing Site Resilience

##### Lab : Planning and Deploying High Availability

- Designing High Availability for Exchange Server
- Implementing High Availability for Exchange Servers

After completing this module, students will be able to:

- Describe high availability planning in Exchange Server 2010.
- Design high availability for mailbox databases.
- Design high availability for non-Mailbox server roles.
- Design site resilience.

#### Module 9: Planning a Disaster Recovery Solution

This module explains how to plan a disaster recovery solution for Exchange Server 2010. It describes how to plan for disaster mitigation and then explains how to design Exchange Server backup and recovery.

##### Lessons

- Planning for Disaster Mitigation
- Planning Exchange Server Backup
- Planning Exchange Server Recovery

##### Lab : Planning a Disaster Recovery Solution

- Planning Disaster Recovery for Vancouver
- Planning Disaster Recovery for San Diego

- Implementing Single-Item Recovery

After completing this module, students will be able to:

- Plan for disaster mitigation.
- Plan Exchange Server backup.
- Plan Exchange Server recovery.

Module 10: Planning Microsoft Exchange Server 2010 Monitoring and Troubleshooting This module explains how to develop a plan for monitoring and troubleshooting the Exchange Server environment. It first describes the various options for monitoring the different server roles in Exchange Server 2010. The module then describes the available troubleshooting tools and explains how to plan for troubleshooting issues in message delivery, client access, and databases. Lessons

- Planning Exchange Server Monitoring
- Planning Exchange Server Troubleshooting

Lab : Planning Exchange Server 2010 Monitoring and Troubleshooting

- Establishing a Baseline for Performance
- Measuring the Production System Performance under Additional Load

After completing this module, students will be able to:

- Plan Exchange Server monitoring.
- Plan Exchange Server troubleshooting.

Module 11: Upgrading to Microsoft Exchange Server 2010 This module explains how to plan and implement an upgrade from Exchange Server 2003 or Exchange Server 2007 to Exchange Server 2010. It first provides an overview of the various upgrading scenarios. The module then describes how to plan the upgrade from Exchange Server 2003 to Exchange Server 2010 and from Exchange Server 2007 to Exchange Server 2010. Lessons

- Overview of Upgrading to Exchange Server 2010
- Planning the Upgrade from Exchange Server 2003 to Exchange Server 2010
- Planning the Upgrade from Exchange Server 2007 to Exchange Server 2010

Lab : Upgrading to Exchange Server 2010

- Reviewing the Exchange Server 2010 Design
- Designing an Exchange Server 2010 Upgrade Strategy

After completing module, students will be able to:

- Describe the general Exchange Server 2010 upgrade scenarios and strategies.
- Plan the upgrade from Exchange Server 2003 to Exchange Server

2010.

- Plan the upgrade from Exchange Server 2007 to Exchange Server 2010.

Module 12: Integrating Microsoft Exchange Server 2010 with Other Messaging Systems This module explains how to integrate Exchange Server 2010 with other messaging systems and with federated partners. It first describes the various coexistence scenarios and then explains how to design Exchange Server 2010 integration with other messaging systems. The module also describes how to design the integration of Exchange Server 2010 with federated partners and with Exchange Online. Lessons

- Designing Exchange Server 2010 Integration with Other Messaging Systems
- Designing Exchange Server 2010 Integration with Federated Partners
- Designing Exchange Server 2010 Integration with Exchange Online

Lab : Integrating Exchange Server 2010 with Other Messaging Systems

- Designing Exchange Server 2010 Coexistence with Another Messaging System

After completing this module, students will be able to:

- Design Exchange Server 2010 integration with other messaging systems.
- Design Exchange Server 2010 integration with federated partners.
- Design Exchange Server 2010 integration with Microsoft Exchange Online.
